

Calculating the Return on Investment with HybridChart

Real Stories from HybridChart Customers

One of the most powerful benefits of HybridChart is the nearly immediate and obvious return on your investment. HybridChart is possibly one of the easiest software solutions to determine ROI because it is built around numbers, data and reports. We recently had the pleasure of visiting with two of our valued clients and discussed the impact HybridChart has had on their practice.

Cardiac Solutions

Sean Morgan, PA-C was kind enough to allow us a glimpse into his day-to-day operations and the workflows of their consultation coordinators and schedulers. HybridChart has impacted both of these areas of their practice, as well as their revenue. HybridChart has made his work much less cumbersome, *saving them hours of work and recovering \$30,000 in missed hospital charges in one month's time*. Needless to say, Sean is a huge advocate for HybridChart!

Arizona Cardiology

We had the opportunity to shadow Andrew Rudd, a Billing Specialist at Arizona Cardiology, and see HybridChart from the client's billing perspective. Andrew showed us the large number of reams of paper they went through regularly prior to implementing HybridChart. On average, HybridChart *saves Andrew between 3-4 hours a day*, dramatically increasing productivity.

Don't delay. Drastically impact your bottom line and free up your week to focus on what matters most to you.
